

## Water Testing Laboratories

Testing private well water?

The Board of Health does not recommend any specific company. Certifications can change. Residents should use a state approved testing laboratory. The current state approved list can be found at:

<https://www.mass.gov/how-to/find-a-certified-laboratory-for-water-testing>

Please note that not all laboratories test for Radon. Many will make the service available through a subcontract. It is best to inquire with the laboratory as to their procedure for Radon testing.
