

Recycling - Batteries

Acceptable:

Solid household and automobile batteries

Not Acceptable:

Items containing mercury (thermostats, thermometers, some switches) should be handed to the attendant.

How and where to recycle:

Large batteries should be placed near buckets on compactor platforms.

Smaller batteries should be placed in marked buckets on compactor platforms (Location 14).

Recycling information:

Batteries contain a number of heavy metals and toxic chemicals and disposing of them by the same process as regular household waste has raised concerns over soil contamination and water pollution.

Some materials in these items are recycled.
