

# Massachusetts Department of Public Health Arbovirus Surveillance Program Report

## Key Public Risk Communication Messages for This Week:

MDPH identified 15 EEE positive mosquitoes from Bristol, Hampshire, and Plymouth Counties and 279 WNV positive mosquito samples from Barnstable, Berkshire, Bristol, Dukes, Essex, Franklin, Hampden, Hampshire, Middlesex, Norfolk, Plymouth, Suffolk, and Worcester Counties. In response to increasing arbovirus detections, risk levels have been elevated in impacted communities. August and September are peak months for human disease. Personal protection measures are recommended due to these findings and average mosquito vector populations across the state. Check your risk levels throughout the season by visiting our interactive site <https://www.mass.gov/info-details/massachusetts-arbovirus-update>

Regional precipitation events and average temperatures will support increased populations of WNV and EEE mosquito vectors. Avoid mosquito bites by using EPA approved repellents, appropriate clothing, and avoiding peak mosquito activity between dusk and dawn. Remove standing water by emptying containers and tarps.

Please review the 2025 MDPH Surveillance and Response Plan for updates to risk levels and risk messaging. [www.mass.gov/doc/2025-arbovirus-surveillance-and-response-plan/download](http://www.mass.gov/doc/2025-arbovirus-surveillance-and-response-plan/download)

<b>WNV and EEE Virus Surveillance Summary</b>	
Results contained in this report reflect data up to and inclusive of MMWR Week 34 (Sunday, 08/17/2025-Saturday, 08/23/2025)	
<b>Mosquito Surveillance</b>	
Number of Mosquito Samples Tested	7243
Number of WNV Positive Samples	279
Number of EEE Positive Samples	15
<b>Equine/Mammal Surveillance</b>	
Number of Mammal Specimens Tested	0
Number of WNV Positive Horses	0
Number of EEE Positive Horses	0
Number of other WNV Positive Mammals	1
<b>Human Surveillance</b>	
Number of Human Specimens Tested	102
Number of Human WNV Cases	0
Number of Human EEE Cases	0
